WELLFLEET

34 Acres

Not To Be Used For Navigational Purposes

LONG POND (Wellfleet)

General Information:

This 34-acre natural great pond has an average depth of 16 feet and a maximum depth of 50 feet. Transparency is very good, the bottom is composed primarily of sand, and aquatic vegetation is scarce.

The pond is located less than a mile east of Route 6 and south of Gull Pond. A town landing and beach suitable for launching car top boats and canoes provide access. To get there, take Long Pond Road from Route 6. The access is located on the northwestern end of the pond just off Long Pond Road.

This pond was reclaimed in 1954 and 1965. Following the last reclamation it was restocked with chain pickerel, golden shiners and alewives.

Fish Populations:

No recent fisheries surveys have been conducted on this pond. No fisheries data is available.

Fishing:

This pond is acidified. While pickerel are presumably still present, growth rates and reproduction are undoubtedly affected and the pond cannot be expected to provide much in the way of fishing action.
